## WE CLAIM:

- 1 1. A computer network for simultaneously sharing images and data in a presentation with
- 2 individual scan and reset by a plurality of viewers/users, comprising:
- a) a server coupled via the network to a plurality of computers for purposes of
- 4 conducting the presentation;
- b) a selecting apparatus coupled to the network and selecting one of the computers
- 6 as a leader user client computer, the remaining computers serving as audience user client
- 7 computers;
  - c) a transmitting apparatus coupled to the server and transmitting the presentation as
- 9 a series of web pages from the server to the leader user client and audience user client
- 10 computers; and
- d) a displaying apparatus at the leader user client and audience user client computers
  - which displays each web page including a time line table identifying each web page displayed in
- the presentation.
  - 1 2. The computer network of Claim 1 further comprising:
  - e) a web page identification apparatus which identifies the location of each web page
  - 3 in the presentation by a Uniform Resource Locator in the time line table.
  - 1 3. The computer network of Claim 2 wherein the web page identification apparatus
  - 2 further identifies each web page in the presentation by a caption in the time line table.

- 1 4. The computer network of Claim 1 further comprising:
- 2 f) a storage apparatus which stores web pages transmitted by the server to the
- 3 audience user client computers.
- 1 5. The computer network of Claim 1 further comprising:
- 2 g) a reset apparatus in each audience user client computer enabling a viewer/user to
- 3 select a different web page than the current web page displayed at the audience user client
- 4 computers.
- 1 6. The computer network of Claim 1 further comprising:
- 2 h) an entering apparatus in the leader user client and audience user client computer
- 3 which enters successive URL's and corresponding web page captions in the time line table as the
- 4 presentation progresses.
- 1 7. The computer network of Claim 1 further comprising:
- 2 i) browser software stored in the leader user client and audience client computers for
- 3 interacting with the server.
- 1 8. The computer network of Claim 1 wherein the web page is in the HTML format.
- 1 9. The computer network of Claim 1 wherein the network is the Internet.
- 1 10. The computer network of Claim 1 wherein the server uses HTTP protocol.

14

- 1 11. A server for simultaneously sharing images and data in a presentation with individual
- 2 scan and reset by a plurality of viewers/users, comprising:
- a) a memory coupled to a processor, a network adapter and a database via a data
- 4 base;
- b) a presentation tier installed in the memory which interfaces with leader user client
- 6 and audience user client computers via a network in receiving and responding to requests from
- 7 the leader user client and audience user client computers;
- 8 c) a business logic installed in the memory which processes and responds to the 9 requests received by the presentation tier;
  - d) visitor object software installed in the business logic tier which tracks each request received by presentation tier; and
  - e) a database server interface which provides web pages in a presentation to the leader user client and audience user client computers in response to requests from the leader user client computer.
- 1 12. The server of Claim 11 further comprising:
- 2 f) an application services objects partition including software setting up the sharing
- 3 of images and data by the leader user client and audience user client computers.
- 1 13. The server of Claim 11 further comprising:
- 2 g) leader interaction application installed in an application services object partition,
- 3 the software implementing requests from the leader user client computer to the server and
- 4 responding to the leader user client requests by the server.

1

2

5

6

- 1 14. The server of Claim 11 further comprising:
- 2 h) audience interactive application software installed in an application services
- 3 object partition, the software implementing requests from the audience user client to the server
- 4 and responding to the audience user client computers by the server.
- 1 15. The server of Claim 11 further comprising:
- 2 i) visitor object software which processes requests from the leader user client and
- 3 audience user client computers and determines whether the requests is a setup application or
- 4 leader interaction or audience interaction request and directing the request to the determined
- 5 application for processing and response to the requesting leader user client computer or to the
- 6 audience user client computer.
  - A method for simultaneously sharing images and data in a presentation with individual scan and reset by a plurality of viewers/users, comprising the steps of:
- a) coupling a server via a network to a plurality of computers for purposes of conducting the presentation;
  - b) selecting one of the computers as a leader user client computer, the remaining computers serving as audience user client computers;
- 7 c) transmitting the presentation as a series of web pages from the server to the leader 8 user client and audience user client computers; and
- d) displaying at the leader user client and audience user client computers each web page including a time line table identifying each web page displayed in the presentation.

- 1 17. The method of Claim 16 further comprising the step of:
- e) identifying the location of each web page in the presentation by a Uniform
- 3 Resource Locator in the time line table.
- 1 18. The method of Claim 16 further comprising the step of:
- 2 f) identifying each web page in the presentation by a caption in the time line table.
- 1 19. The method of Claim 16 further comprising the step of:
- 2 g) storing web pages transmitted by the server in a cache associated with each
- 3 audience user client computers.
- 1 20. The method of Claim 16 further comprising the step of:
- 2 g) enabling a viewer/user to select a different web page than the current web page
- 3 displayed at the audience user client computers.
- 1 21 The method of Claim 16 further comprising the step of:
- 2 h) entering successive URL's and corresponding web page captions in the time line
- 3 table of each web page as the presentation progresses.
- 1 22. The method of Claim 16 further comprising the step of:
- 2 i) storing browser software in the leader user client and audience client computers
- 3 for interacting with the server and forming a web content page area, a time line table area and a
- 4 caption area in a screen.

- 1 23. A program medium, executable in a computer system, for simultaneously sharing
- 2 images and data in a presentation with individual scan and reset by a plurality of viewers/users,
- 3 comprising:
- a) program instruction in the medium coupling a server via a network to a plurality
- 5 of computers for purposes of conducting the presentation;
- b) program instruction in the medium selecting one of the computers as a leader user
- 7 client computer, the remaining computers serving as audience user client computers;
- 8 c) program instruction in the medium transmitting the presentation as a series of web
- 9 pages from the server to the leader user client and audience user client computers; and
- d) program instruction in the medium displaying at the leader user client and
  - audience user client computers each web page including a time line table identifying each web
- page displayed in the presentation.
  - 1 24. The program medium of Claim 23 further comprising:
  - e) program instruction in the medium identifying the location of each web page in
  - 3 the presentation by a Uniform Resource Locator in the time line table.
  - 1 25. The program medium of Claim 23 further comprising:
  - program instruction in the medium identifying each web page in the presentation
  - 3 by a caption in the time line table.

- 1 26. The program medium of Claim 23 further comprising:
- 2 g) program instruction in the medium storing web pages transmitted by the server in
- 3 a cache associated with each audience user client computers.
- 1 27. The program medium of Claim 23 further comprising:
- 2 g) program instruction in the medium enabling a viewer/user to select a different
- 3 web page than the current web page displayed at the audience user client computers.
- 1 28. The program medium of Claim 23 further comprising:
- 2 h) program instruction in the medium entering successive URL's and corresponding
- 3 web page captions in the time line table of each web page as the presentation progresses.
- 1 29. The program medium of Claim 23 further comprising:
- 2 i) program instruction in the medium storing browser software in the leader user
- 3 client and audience client computers for interacting with the server and forming a web content
- 4 page area, a time line table area and a caption area in a screen.
- 1 30. In a server, a method for simultaneously sharing images and data in a presentation with
- 2 individual scan and reset by a plurality of viewers/users, comprising the steps of
- a) coupling a memory coupled to a processor, a network adapter and a database via a
- 4 data base;

2

3

- b) installing a presentation tier for interfacing with leader user client and audience
   user client computers via a network in receiving and responding to requests from the leader user
   client and audience user client computers;
  - c) installing a business logic in the memory for processing and responding to the requests received by the presentation tier;
- 10 d) installing a visitor object software in the business logic tier for tracking the each
  11 request received by presentation tier; and
  - e) providing a database server interface for web pages in a presentation to the leader user client and audience user client computers in response to requests from the leader user client computer.
- 1 31. The method of Claim 30 further comprising the step:
  - f) setting up the sharing of images and data by the leader user client and audience user client computers using a set up application.
- 1 32. The method of Claim 30 further comprising the step of:
- g) installing a leader interaction application implementing requests from the leader user client computer to the server and responses to the leader user client requests by the server.
- 1 33. The method of Claim 30 further comprising the step of:
- 2 h) installing an audience interactive application handling requests from the audience 3 user client to the server and responses to the audience user client computers by the server.

- 1 34. The method of Claim 30 further comprising the step of:
- 2 i) processing requests from the leader user client and audience user client
- 3 computers and determining whether the requests is a setup application or leader interaction or
- 4 audience interaction request and directing the request to the determined application for
- 5 processing and response to the requesting leader user client computer or to the audience user
- 6 client computer.
